

9.5 pH

700 times the oxygen level of average water

pH Performance Water

pPerformance Water is the commercial result of years of research and development pioneered around oxygen activating technology applied to drinking water. Aqua Technology Systems, LLC.'s pPerformance Water is activated through a process which isolates high pH level water cells, decreasing the cells per drop from 32 to 3. The result, up to 700 times the oxygen levels of normal bottled water.

Benefits

Drinking pPerformance Water assists the metabolism and immune system by obtaining optimum pH levels. pPerformance Water has a 9.5pH. This high level of oxygen aids in keeping pH levels from dropping. A drop in the body's pH will cause it to draw those factors from tissue, skin, bone or vital organs. pPerformance Water promotes peak performance for any sports activity, workout, daily activity and most importantly day to day health.

Bottle Size	16.9 ounces
Case Count	24 - full case sales only

No Chemicals

Biodegradable Bottle

100% Mineral Spring Water

Rapid Rehydration

The decreased cell size in pPerformance Water allows the oxygen enriched water to be absorbed by the muscles and tissues much faster and more efficiently than tap water or any sports drink. In fact, pPerformance Water will begin hydrating the body as soon as it is swallowed and continues to assist in keeping it properly hydrated at all times. Acidic sports drinks can, in some ways, actually work against the body. Company research supports that athletes confirm improvement in how they feel as well as the way they perform after only a short time of drinking pPerformance Water.
